Taftonhouse June 4th "18"

Gentlemen

I have your letter of the 7th inst before me. In reply I have to state that we have a boiler for the 18 horse engine at Saltburn; but we shall want the winding apparatus for the engine. The 18 pinion & 6 feet ~~wheel~~ ~~cog~~ will be sufficient. Rope will same as Taftan We shall want the rope roll for the 40 horse engine when the engine shaft for Saltburn. I quite expected this was all arranged before and that the engine would have been at the place before now. I think as you have the patterns the same as at Taftan it had better be made so, as we may likely require the horizontal pumping engine

placed in the same way as at Sapton.

I should feel obliged if you would send plans for the Foundations at Shibden as soon as possible. We shall be greatest part of the summer sinking for want of these engines.

I am

Yours truly

Geo. Stephenson

Dear Brother,

I expected to have been at home the latter end of this week so that I might have met you on Monday there. but I fear it is now — doubtful whether I shall be at home before the middle of the week. I have at Mr Fitzgeralds but might have taken me your home been looking for a letter I hope you have caught it by this time —

I am your
affectionate Brother
Geo. Stephenson

I will write to you as soon as I can fix a day to meet me

Dear Phila

I have received your letter containing your numerous complaints against Mr. Cate, and I have also had me containing Mr. C. says he has found, and that therefore he could not think of retaining you in his employ. How this is I do not know, but in this the statement lies. Mr. Cate I know little of, but always supposed him to be a

I have also from Mr. Cate likewise some charges against you: that you had refused some property which you to its rightful owner,

Gentleman. Of your management of the Colliery I also know nothing, and therefore cannot give a judgment upon the case. It strikes me that there are several little Collieries between you and the Potteries: make enquiries and see Hutcheson at Mr Sparrow's Colliery near Lane End; and he may probably be able to tell you something. Hutcheson is a Newcastle man, and would I daresay be glad to see you.

It appears to me that you are most likely to meet with something in that neighbourhood that will suit you better than any thing I can offer you at present. I have

how you succeed.

You will recollect that a surveying instrument was sent to the Colliery. If it is in your possession and you do not want it, let it be returned to me as I could make use of it; if you can take possession of it, let me know, as it must be sent by some body.

I may possibly be able to call upon you before your sale takes place

I am dear Philip
Yours truly
Geo. Stephenson

THE ROYAL PARTY VIEWING STOCKHOLM FROM THE MOSEBACKE GARDENS.

The morning after their Royal Highnesses' arrival at Stockholm (Tuesday) was devoted to a promenade for the purpose of viewing that city and its environs. The King of Sweden himself driving the Prince of Wales in a handsome mail-phaeton, while the Queen of Sweden and the Princess of Wales sat in an open carriage, Prince Oscar of Sweden driving a carriage of his own, and the ladies and gentlemen of both Courts following in several other vehicles, the Royal party set out from the palace and went up a neighbouring hill, called the Mosebacke, which commands a magnificent prospect. From the level almost of the sea, upon which, as in Venice, the majority of houses in Stockholm seem to rest, this hill shoots up suddenly to a considerable height, its sides being covered with buildings which rise, terrace above terrace, until at the summit there is a small pleasure-ground and tea-garden, affording a view of many miles in all directions, a spot so highly prized by residents that the name given to it signifies "the mountain of Moses." Any monarch might be proud of having such a capital to show, and the King, with evident pleasure, pointed out to the Prince and Princess from the pavilion, or raised orchestra, in the Mosebacke Gardens, many interesting localities which are associated with historical traditions. Ancient Stockholm—literally, the pile island—lies in what can still be recognised as the Lake Mälar; but its buildings and population have gradually spread themselves over the surrounding islets, till the whole is so looped together and tangled with bridges, quays, parks, and public wharves that it is difficult any longer to distinguish the natural course of the stream from the artificial inclosures that science or commerce has created. Lake Mälar stretches away to the left of the town, and to the right the deep-water channel or bay winds towards the sea, the view for miles in both directions being so mixed up and blended with hills, woods, and minor sheets of water that the eye does not fix itself, as in other scenes, upon some few prominent objects, but ranges, delighted, over the whole panorama. The sheets of water below, not sour and stagnant, but fresh and teeming with fish, are covered with vessels, perpetually shooting in all directions. Fishing-smacks, flat boats pulled by natives in their extraordinary costumes, sailing-ships of great size, and trading steamers are moving about all day long, and, more numerous than any others, the little steam-gondolas, with extraordinary funnels, dart along with incredible speed, uttering sharp, shrill notes of warning to all who venture across
